DEVELOPMENT CORPORATION

ONEIDA ENERGY STORAGE

Update for the Six Nations community

PROJECT OVERVIEW

The Oneida Energy Storage Project (OES Project) will draw and inject energy into the power grid to help stabilize Ontario's electricity sector by providing important grid balancing services. The OES Project will provide clean and reliable power capacity by drawing and storing renewable energy during off-peak periods and releasing it to the Ontario grid when energy demand is at its peak.

The OES Project consists of a 250 Megawatt/1000 Megawatt-hour energy storage facility to be strategically located on 10 acres of land (the Site). The Site is adjacent to the existing Jarvis Transformer Station and Hydro One Corridor. The OES Project is designed to lower electricity costs for customers, while creating local employment, driving energy savings, and reducing greenhouse gas emissions.
